Improvement of our stainless steel offer

Dear Sirs,

In response to the growing demand for stainless steel measuring couplings, we now offer our 1.4571 stainless steel couplings of the series 1620 with the integral thread G3/8 and G1/2 as one-piece versions from stock.

You will now benefit from parts that are overall more compact, have a less prominent height and, compared to the two-part version, we have improved the conditions while simultaneously reducing delivery times.

We are looking forward to your inquiries and are, as usual, at your disposal to answer all questions concerning to our products.

Best regards
Spradow GmbH & Co. KG
